

MALIBU REBUILDS

The City is encouraging residents to replace their fire damaged landscapes with native plants which help to rebuild lost habitat. The list below contains commonly planted native species recommended by the [Malibu Monarch Project](#) that can be used to create pollinator gardens to support monarch butterflies. A more comprehensive list of species appropriate for the Santa Monica Mountains can be found here ([MalibuCity.org/NativePlants](#)).

Please note that the planting of trees, shrubs and hedges that have the potential to grow over six feet in height requires approval from City Planning staff. If you are replacing Woolsey Fire damaged or destroyed vegetation, Planning staff can assist you by processing an expedited Planning Verification approval. Visit the Fire Rebuild table at City Hall for more information.

Heart-leaved Penstemon L,PS,Mar-Aug

Trees

Bigleaf Maple

Toyon

California Sycamore (moderate to high water needs)

Coast Live Oak

California Bay (moderate to high water needs)

Valley Oak
