Hazardous Materials Identification

FPG - 2015 - 5003.5

APPROVED & AUTHORIZED BY: Christopher P. Jensen CHRISTOPHER P. JENSEN FIRE MARSHAL

DATE: MARCH 19, 2019

Hazardous Materials Identification

PURPOSE

Fire incidents and other accidents involving hazardous materials require special consideration by emergency response personnel. Posted hazardous materials identification signs are required in order to provide specific information about the nature of the materials.

SCOPE

This document was developed to replace NFPA 704 for the design and placement of hazardous materials identification signs on property and within structures in which hazardous materials and hazardous wastes are stored, used, processed, or handled. All references to NFPA 704 have been deleted from the California Fire Code (CFC) by amendment (2013 CFC 5003.5) and replaced with the information provided in this guideline.

SUBMITTAL REQUIREMENTS

1. Applicability

In general, hazardous materials signs are required when the quantities of hazardous materials at a single site are sufficient to warrant the issuance of a permit. A table defining these quantities is referenced in Attachment 1.

2. Classification of Hazardous Materials

Hazard classes are summarized in two distinct categories: physical hazards and health hazards. Many hazardous materials pose multiple hazards and, thus, warrant several hazard classes (e.g., sulfuric acid =Toxic liquid, Corrosive liquid and Class 2 Water Reactive liquid). In order to accurately assess the nature of the hazardous materials stored or used at a business, the business owner or their representative must complete a Chemical Classification Packet (HMMP). Businesses must accurately assess their materials against the specific hazard class definitions found in the CFC. In addition, the business must calculate the total quantities of materials within each hazard class for both use and storage conditions. Once accomplished, aggregate quantities of material exceeding the permit threshold are required to have hazardous materials identification signs posted.

Specific hazard classes as defined in the CFC are listed below for reference. NOTE: *Many of these hazard classes may be found in all three material states (solid, liquid, gas), and many chemicals have two or more hazard classes*

EXPLOSIVE	FLAMMABLE GAS	LIQUEFIED PETROLEUM GAS
FLAMMABLE I-A	FLAMMABLE I-B	FLAMMABLE I-C
COMBUSTIBLE II	COMBUSTIBLE III-A	COMBUSTIBLE III-B
FLAMMABLE SOLID	ORGANIC PEROXIDE I	ORGANIC PEROXIDE II
ORGANIC PEROXIDE III	ORGANIC PEROXIDE IV	ORGANIC PEROXIDE V
OXIDIZER 1	OXIDIZER 2	OXIDIZER 3
OXIDIZER 4	PYROPHORIC	UNSTABLE REACTIVE 1
UNSTABLE REACTIVE 2	UNSTABLE REACTIVE 3	UNSTABLE REACTIVE 4
WATER REACTIVE 1	WATER REACTIVE 2	WATER REACTIVE 3
HIGHLY TOXIC	TOXIC	CORROSIVE
CRYOGEN		

3. Hazardous Materials Identification Sign Requirements

A. Rooms, Buildings, Outside Areas, Aboveground Tanks, and Vats

Hazardous materials identification signs shall state in plain language the hazard class(es) presented by the materials stored or used (see list above).

- 1) All lettering shall be in capital letters on a contrasting background (e.g. white on red, white on black).
- 2) Signs shall be of durable construction and suitable for the environment in which they are posted.
- 3) Letters shall be not less than three inches in height when a single hazard class is present. When two hazard classes are present the letters may be reduced to not less than two inches in height. If three or more hazards are present, letters shall be a minimum of one inch in height. Lettering height adjustments allow sign dimensions to be of a size that can be placed on doors, buildings, and tanks and still be visible to emergency response personnel.
- 4) The material state (solid/liquid/gas) is also required to be included on the sign for each hazard class identified.
- 5) When tanks or vats are heated, this information shall also be specified on the tank (e.g., HEATED TANK).
- 6) When multiple hazards exist, the sign must contain all applicable hazards. Exception: When multiple hazards are present and they are of the same general class (e.g., Water Reactive I and Water Reactive 3, Organic Peroxide III and Organic Peroxide II, etc.), only the greatest hazard within each class is required to be listed on the sign.
- B. Individual Containers, Cartons, and Packages

Individual containers, cartons and packages shall be labeled in accordance with nationally recognized standards. Label and lettering size shall be determined by the physical size of the container, package, or vessel. Requirements are met if:

- Labeling is in accordance with DOT or OSHA requirements where the label provides sufficient data to identify the content and is consistent with the specific hazard classes defined in the CFC.
- 2) The label indicates the primary hazards of the product and is generally consistent with the specific hazard classes defined in the CFC.

4. Signage Examples

Example #1:

Hazardous material present: Sodium Hypochlorite, 15% Solution (Corrosive)

• All letters are a minimum of 3" in height

Example #2:

Hazardous material present: Hydrogen Peroxide 35% (Class 2 Oxidizer, Corrosive)

• All letters are a minimum of 2" in height

Example #3:

Hazardous materials present: Isopropyl Alcohol (Flammable I-B) Sulfuric Acid, 30% (Water Reactive 1/Toxic/Corrosive)

• All letters are a minimum of 1" in height

Example # 4: NFPA 704 Placards

5. Hazardous Materials Identification Sign Placement

Hazardous materials identification signs shall be located as specified by this document.

A. Rooms, Buildings, or Outside Areas

Hazardous materials identification signs shall be placed adjacent to or on all swinging doors providing direct access to any room, building, or area containing hazardous materials. Signs may be located on or adjacent to the doors as directed by the inspector. The location and number of signs is subject to the approval of the inspector based on site- specific conditions.

B. Aboveground Tanks and Vats

Tanks and vats shall be posted with hazardous materials identification signs located so they are visible from all angles of approach. In general, this will require four signs located at equally distant points around the vessel. The number of signs may be reduced when the vessel cannot be approached from one or more sides.

C. Individual Containers, Cartons, and Packages

Hazardous materials identification signs shall be located in a manner that allows the handler of the containers, carton, or package to see the label during the storage and handling process. One or more labels may be appropriate to meet these requirements.

D. Other Warning Sign Requirements

This guideline shall not be used to prevent the installation of any specialized warning sign otherwise required by adopted codes and standards (e.g., No Smoking, Welding, LPG, etc.).

E. Existing Conditions

When Murrieta Fire & Rescue has previously approved hazardous materials identification signs and they continue to provide accurate information, such signs shall be deemed acceptable without modification.

6. Sign Placement Examples

Hazardous Materials Identification Sign

Example #2: Warehouse/Office

Example #3: Fenced Outside

Attachment 1

Hazardous Materials Permit Chart

HAZARD CLASS/PERMIT TYPE PERMIT AMOUNTS DISCLOSURE AMOUNT			
Explosive	Any amount	Any amount	
Liquefied Petroleum Gas	Any amount (Except R-3, 500lbs)	55 gallons	
Flammable Gas	> 200 cubic feet	200 cubic feet	
Cryogen, Flammable	> 1 gallon inside, 60 gallons	55 gallons	
	outside	0	
Inert Gas	> 6000 cubic feet	200 cubic feet	
Cryogen, Nonflammable	> 60 gallons inside, 500 gallons	55 gallons	
	outside		
Flammable Liquid	> 5 gallons inside, 10 gallons	55 gallons	
	outside		
Combustible Liquid (II & IIIA)	> 25 gallons inside, 60 gallons	55 gallons	
	outside		
Flammable Solid	> 100 pounds	500 pounds	
Unstable Reactive, Class 3 & 4	Any amount	55 gallons	
Unstable Reactive, Class 2	> 5 gallons, 50 pounds	500 pounds	
Unstable Reactive, Class 1	> 10 gallons, 100 pounds		
Water Reactive, Class 3	Any amount	55 gallons	
Water Reactive, Class 2	> 5 gallons, 50 pounds	500 pounds	
Water Reactive, Class 1	> 55 gallons, 500 pounds		
Oxidizing Gas	> 504 cubic feet	200 cubic feet	
Cryogen, Oxidizing	> 10 gallons inside, 50 gallons	55 gallons	
	outside		
Oxidizer, Class 4	Any amount	55 gallons	
Oxidizer, Class 3	> 1 gallon, 10 pounds	500 pounds	
Oxidizer, Class 2	> 10 gallons, 100 pounds		
Oxidizer, Class 1	> 55 gallons, 500pounds		
Organic Peroxide, Class I & II	Any amount	55 gallons	
Organic Peroxide, Class III	> 1 gallons, 10 pounds	500 pounds	
Organic Peroxide, Class IV	> 2 gallons, 20 pounds		
Highly Toxic	Any amount	55 gallons	
		500 pounds	
Cryogen, Highly Toxic	Any amount	Any amount	
Highly Toxic Gas	Any amount	Any amount	
loxic	> 10 gallons, 100 pounds	55 gallons	
	0	500 pounds	
Toxic Gas	Any amount	200 cubic feet	
Corrosive	>55 gallons, 500 pounds	55 gallons	
		500 pounds	
Cryogen, Physical or Health Hazard	Any amount	55 gallons	
Except Flammable, Oxidizer and Inert	> 000 subis fast	000 subis fast	
Corrosive Gas	> 200 cubic feet		
Pyrophoric	Any amount	55 gallons	
		500 pounds	
Pyrophoric Gas	Any amount		
Aerosol Product (Level 2 & 3)	>500 pounds	55 gallons	

Note: Disclosure amounts are required to be reported by using the California Environmental Reporting System (CERS) online. The website is <u>https://cers.calepa.ca.gov/</u>.

For questions concerning setting up a CERS business account, submittal information, and reporting requirements, please contact the County of Riverside Environment Health – Hazardous Materials Hemet Branch Office at **(951) 766-6524**.
